

Project: Meriwa & McIntyre, Gordon
12 storey residential development

Scope of Services

KAE undertook the Mechanical and Electrical services design for this prestigious two apartment block development in Gordon.

The development comprises approximately 130 apartments, town houses, swimming pools, gymnasiums and other associated areas.

Each tower is a stand alone project and will be air conditioned via condenser water systems serving individual room located water cooled AC units.

New power will be brought onto the site via two new HV supplies and kiosk sub stations.

Stair pressurisation will also be provided to many of the stair systems throughout the project.

Natural air supply will be incorporated by careful design to many of the underground car park levels.
